

Boston Dialysis Access Club

Dedicated to the Clinical Practice of Dialysis Access in Greater Boston Area
Phone (617) 763-6412

Dear colleagues:

We are planning the 4th meeting of the Boston Dialysis Access Club to share and learn from our local clinical experience and to discuss current national trends in the clinical practice of all types of vascular access. We hope to continue participation by surgeons, nephrologists, interventional radiologists and nephrologists and dialysis coordinators who are involved in the creation and management of access procedures. We welcome participation from all the medical institutions and private practitioners in the greater Boston area. For the first time we will invite two outside experts, Tip Jennings and John Ross, to join our local presenters.

We have selected Tuesday, May 21, 2019 6:00pm to 8:30 pm as our 4th meeting date “Dialysis Access in 2019 – Challenges and Solutions”. It will be held at: Davio’s, 75 Arlington Street, Boston, MA 02116.

LeMaitre, Medtronic, and WL Gore have graciously agreed to support this event with an unrestricted educational grants through the Vascular Access Society of the Americas (VASA). The meeting will be completely non-commercial.

The program is as follows:

6:00-6:30 pm	Welcome
6:30-7:15 pm	Dinner begins Tip Jennings – Making the most of forearm access options, Jennings-, Gracz, and endo-vascular anastomoses
7:15-7:30 pm	Boston Dialysis Access Club – administrative business
7:30-7:45 pm	Gaurav Sharma – A study of proximal forearm radial RADAR and Jennings accesses
7:45-8:30 pm	John Ross – Unusual and usual solutions to common problems – thinking a new box

We would like everyone who is interested to attend. Please RSVP by email. **Due to limited space, the RSVP will be mandatory to attend. If you have a topic or case to present, please indicate this.** The practice of Dialysis Access can be creative, sometimes difficult and hopefully still fun. There is limited availability to helpful resources and conferences, and a multidisciplinary low-key approach is even more unusual. Please join us in making this endeavor successful.

Sincerely,

Dirk Hentschel, MD
Director, Interventional Nephrology
