

Augmentation Test

Place your fingers on the out-going vein, feel the pulse, press down until no blood is flowing through the access. Keep your finger on the vein and feel for the pulse on the lower part of the access.

Pulse should be **“strong and bounding”** and may cause your finger to **rise and fall** with each beat.

Good to go!

Pulse **does not** become more forceful or **“strong and bounding”**.

Contact expert clinician if any “stop” signs noted.
